

## MOBILE WORK MONITORING & MANAGEMENT SOLUTION FOR THE CLEANING SECTOR

**1.** Tags placed in the premises to be cleaned are read with the handset as the work proceeds. The handset registers the time used in the premises and stores the information.

**2.** When the work is finished, the handset automatically sends the working hours and location data for work monitoring and invoicing.

**3.** The information gathered is used to monitor different areas of the cleaning work, such as efficiency and time spent on tasks. This way our customers can develop the work methods of their staff to perfectly suit each target.

**PANCOMP Clean is a personnel management, planning and work hour reporting system for mobile work force. This solution will enable you to plan and develop work tasks specifically according to given service descriptions.**

### **PANCOMP Clean – Benefits:**

- Operations management in real-time for cleaning business
